Apify · Companies and VAT IDs

Check a list of Czech companies or EU VAT numbers in one run. This Actor runs in your Apify account and writes its results to that run's dataset.

One run can return two record types: a Czech company report and an EU VAT check.

How to use it

1. Open the Actor. Put Czech company IDs in `icos` and country-prefixed EU VAT numbers in `euVatIds`. Keep each ID in quotes to preserve leading zeroes.
2. Set `maxResults`. The default is 10 and the maximum is 50 for each list. Review the event prices on the Actor listing before starting.
3. Start the run and open its dataset. Use `recordType` to distinguish `cz_kyb` from `eu_vies`. Export the results in CSV or JSON.

Try it

```
{"icos":["00094943"],"euVatIds":["CZ00094943"],
 "maxResults":1,"includeTrades":false}
```

Reading the result

This example requests one company report and one VAT check. Read the VIES `status` and revisit UNKNOWN results later. Apify handles the run and billing separately from a direct EuroKYB subscription. Exporting an Apify dataset
